

CoffeePROOF

Stands up to the coffee test

Finally a waterborne white coating that never gets stained. Ever.

CoffeePROOF

The technological challenge of producing a waterborne coating able to resist even coffee stains has been won. CoffeeProof was the first to pass the strictest resistance tests, including those in the Ikea IOS-MAT-0066 standard, going well beyond the parameters required. It also proves to be a new and reliable solution for today's interior design industry. Invaluable for kitchens and living rooms. Put it to the test.

Sayerlack is a brand of
SHERWIN-WILLIAMS

The first waterborne white coating capable of resisting even coffee stains.

Features

- **WATERBORNE TWO-COMPONENT TOPCOAT**
- **OUTSTANDING RESISTANCE TO COFFEE STAINS**
- **SMOOTH FEEL**
- **EXCELLENT RESISTANCE TO METAL-MARKING**
- **EXCELLENT HIDING POWER**
- **HIGH RESISTANCE TO DRY HEAT (UP TO 70°C)**
- **HIGH RESISTANCE TO WRITABILITY**

How to use it

CoffeeProof's topcoat is catalysed with 10% of the hardener recommended in the technical data sheet. It can be applied on previously sanded waterborne, polyurethane and polyester basecoats or melamine paper. It can be applied by spraying, manually or automatically. It requires at least four hours at room temperature (20°C) to dry. Curing improves using forced drying systems.

Advantages

CoffeeProof is the first waterborne pigmented topcoat that can resist coffee stains. Thanks to its chemical-physical resistance, CoffeeProof is the perfect alternative to replace solvent-based topcoats and guarantee compliance with the strict standards regarding emissions. CoffeeProof is therefore the perfect topcoat for waterborne coating systems for kitchen and living room furniture.

Certifications

CoffeeProof passed the Ikea IOS-MAT-0066 test, carried out at the CATAS laboratories, obtaining a R4 result.

The test carried out by CATAS according to the resistance to cold liquids standard (UNI EN12720) requires that a painted surface is exposed to cold liquids after **21 days** from the coating application. Coffee should be cold and remain on the surface for one hour.
